AJAX handling in the TYPO3 Backend

Basic knowledge about how AJAX actions are handled in the TYPO3 Backend and how custom code can be added to be called via AJAX.

Goals:

- I can register routes for backend AJAX calls.
- I know how to process incoming AJAX requests in PHP.
- I can execute AJAX requests in JavaScript.

Links:

- TYPO3 Explained: Client Side AJAX in TYPO3 Backend:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/Backend/AjaxClientSide.html>

Accessing FlexForm Data

Using data provided in FlexForms in plugin CEs and custom records.

Goals:

- I know how FlexForm data is stored in the database.
- I can extract data from a FlexForm field.
- I can modify the contents of a FlexForm field.

Links:

- FlexForms in the Configuration HowTo: <https://docs.typo3.org/m/typo3/reference-coreapi/11.5/en-us/ExtensionArchitecture/HowTo/Configuration.html#flexforms>

Building Custom Dashboard Widgets

This skill covers creating custom widgets for the TYPO3 Backend Dashboard and configuring existing widget groups.

Goals:

- I know which abstract classes and interfaces the core provides, to build my own custom widgets.
- I know how to register new widgets and how to assign them to one or several widget groups.
- I can also create new widget groups.
- I know how to create new DataProvider in order to compose new widgets based on existing widget implementations

Links:

- Register new Widget:: <https://docs.typo3.org/c/typo3/cms-dashboard/12.4/en-us/Configuration/WidgetRegistration.html>

Coding Standards in TYPO3

Knowing how to write code conforming to the coding standards used by the TYPO3 project.

Goals:

- I am familiar with the PSR standard and the usage in TYPO3.
- I know the TYPO3 namespace conventions.
- I know the official TYPO3 coding guidelines for PHP, JavaScript, etc.

Links:

- Coding Guidelines:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/CodingGuidelines/Index.html>

Commands

This skill covers the creation of command-line commands for TYPO3, based on the Symfony Console component.

Goals:

- I know how to execute existing Symfony CLI commands.
- I can create and register new Symfony CLI commands
- I can find my way around existing commands and can modify them.

Links:

- Symfony Command Component: <https://symfony.com/doc/current/console.html>
- Symfony Command within TYPO3: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/CommandControllers/Index.html>

Composer

Composer basics and its usage for PHP projects.

Goals:

I know

- what Composer is
- the purpose and the structure of file composer.json
- what composer.lock is and which purpose it serves
- the difference between the install and the update command

I can

- create a new Composer project
- specify requirements for my project
- install packages using Composer
- update packages
- remove packages

Composer for TYPO3 Extensions

This skill introduces usage of Composer for extensions and their integration into TYPO3 projects.

Goals:

- I know which fields to use in the composer.json of my extension, what they mean and how they work, so that I can create working, readable and helpful composer.json files.
- I can use 3rd-party extensions and my own extensions in my site project via Composer.
- I also know the benefits and drawbacks of using Composer and can advise my coworkers and clients when to use which approach.
- In addition, I can build composer.json and ext_emconf.php files in such a way that their data is synchronized correctly.
- I know how to provide and access public assets in a composer installation.
- Also, I know how to update the autoloader data for non-Composer installations.

Links:

- Composer Documentation: The composer.json Schema:: <https://getcomposer.org/doc/04-schema.md>
- TYPO3 Explained: composer.json:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ExtensionArchitecture/FileStructure/ComposerJson.html>

Contexts & Aspects

This skill introduces usage of the request context and aspects that can be used to enrich this context, e.g. with localization information.

Goals:

- I know the difference between the ApplicationContext and the Context API.
- I can use the Context API, know which Aspects exist, and can access information from Aspects.
- I know how to add my own Aspects to the Context.

Links:

- TYPO3 Explained Application Context:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/RequestLifeCycle/Bootstrapping.html#application-context>

Creating Scheduler Tasks and Commands

How to build Scheduler tasks and commands for automating recurring tasks.

Goals:

- I know how to create a new Scheduler task.
- I know how to create a new command.
- I know about the context Scheduler tasks are executed in.
- I know about the context commands are executed in.
- I know that commands can be executed as scheduler tasks.
- I know the differences between scheduler tasks and commands.

Data structures in TYPO3 core

Classes for data structures, e.g., the BitSet and Enumeration class, and their usage.

Goals:

- I can decide in which cases to use the BitSet class, can explain the drawbacks and know how to use it properly.
- I understand how bit sets work in general.
- I know the use cases of the Enumeration class and the patterns to use for it.
- I know the use case of the TypeInterface and how to use it.

Links:

DataHandler (TCE= TYPO3 Core Engine)

This skill handles basic knowledge of the DataHandler, a TYPO3 Core component for processing user data. It also covers how it can be leveraged in custom developed extensions.

Goals:

- I know how the DataHandler processes data entered in forms in the Backend.
- I know about hooks I can use for modifying data during processing.
- I know how to use DataHandler in my own extensions (e.g. for mass-creation of records).
- I can modify data during the processing of certain tasks (e.g. versioning).

Links:

- TYPO3 Explained DataHandler:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/Typo3CoreEngine/Index.html>

Extension File and Folder Structure

Knowing the file structure of an extension and where to place files by convention and due to technical requirements.

Goals:

- I know how the directory structure of a TYPO3 extension looks like and the additional Extbase conventions.
- I know the purposes of files in TYPO3 extensions (such as `ext_emconf.php`, `ext_tables.php`, and others).
- I can create an extension that is installable via the TYPO3 Extension Manager and/or Composer.

Extension scanner

This skill covers the Extension Scanner, which extension authors and project maintainers can use to detect possible problems in their extensions while upgrading them to a newer TYPO3 version.

Goals:

- I can use the extension scanner from within the TYPO3 BE and from the command line. I know what kind of problems the scanner finds, and the limitations of the scanner.
- I can interpret findings of the scanner and judge whether they are relevant for my project.

Links:

- Extension Scanner on command line:: <https://github.com/Tuurlijk/typo3scan>

Extension: Lowlevel

The lowlevel extension allows examining the current TYPO3 configuration.

Goals:

- I know which information the backend module of EXT:lowlevel provides.
- I can examine my configuration changes with the help of the EXT:lowlevel backend module.
- I know how to debug execution order of middlewares and event handlers with EXT:lowlevel.
- I know how to utilize the tools that EXT:lowlevel provides for managing my development instance.

Links:

- Manual of EXT:lowlevel:: <https://docs.typo3.org/c/typo3/cms-lowlevel/12.4/en-us/>

Flash Messages

This skill covers flash messages, a mechanism used to communicate e.g. results of an action to the user.

Goals:

- I know where the Core flash messages and notifications can be used (and where not). I know which type of flash message to use for what purpose.
- I can create and output flash messages using PHP, HTML and JavaScript. I can output flash messages created in existing code, e.g. other extensions.

Flexform Concepts

Basics about the concept of Flexforms and how it relates to the TCA.

Goals:

- I know what a Flexform data structure is and how it compares to a similar TCA data structure.
- I know how data for a Flexform field is stored.
- I can create a Flexform data structure in XML.
- I can configure a Flexform field to use my XML data structure.

Links:

- TYPO3 Core API: FlexForms:: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/FlexForms/Index.html>

Git basics

Basics and most important commands for working with the version-control system Git.

Goals:

I know

- what a VCS is
- what a branch is
- what a tag is
- what a repository is
- what a merge is

I can

- initialize a Git repository
- execute commands "commit", "push" and "pull"
- create a branch and work on it
- assign a tag to a certain development state
- merge code

Implementing Custom Validators

How to provide custom data validation in Extbase.

Goals:

- I know which classes I can use as a base for my validator.
- I know where to put a custom validator class by convention and how to register the class.
- I know in which location a custom validator class should be stored by convention and how to register the class.
- I know how to use the validator in a controller action.

Links:

- TYPO3 Core API: Validator: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ExtensionArchitecture/Extbase/Reference/Domain/Validator.html>

Implementing MVC in TYPO3

Introducing the concept of MVC in Extbase: base classes for models, controllers, repositories; the concept of services and utilities and when to use them.

Goals:

- I know which kinds of models exist in Extbase.
- I know how a repository for a model is implemented.
- I know how plugins relate to controllers and actions.
- I know how TYPO3/Extbase determines a template for a controller action.
- I can create a new plugin with one or multiple controllers.
- I can define templates for my controller actions.
- I can create a model and the related repository.

Implementing ViewHelpers

Provides the foundations for using custom PHP code in a Fluid-based view.

Goals:

- I know which base classes for ViewHelpers exist.
- I know which functionality should be placed in a ViewHelper and what is better suited for a controller, service or utility.
- I can create my own ViewHelpers and use them in a template.
- I can register custom ViewHelper arguments.
- I can implement a custom conditional ViewHelper.

Links:

JavaScript Event API in the Backend

This skill covers the JavaScript API for Events in the TYPO3 Backend, relevant for programming custom backend modules and extending existing modules.

Goals:

- I know about the Event API in JavaScript
- I can register my own event listeners
- I know about the different event strategies and their performance implications
- I know about the different event classes and when to use which of them

Links:

- TYPO3 Core ChangeLog on the event API: <https://docs.typo3.org/c/typo3/cms-core/main/en-us/Changelog/10.3/Feature-90471-JavaScriptEventAPI.html>

JavaScript handling in the Backend

This skill covers the TYPO3-specific parts of RequireJS: how this library is used in TYPO3 and how developers can leverage the TYPO3 Core API to use their own JavaScript code in the TYPO3 Backend.

Goals:

- I know how to write JS code that is compatible with the TYPO3 backend.
- I know how to load my JS code via the PageRenderer.
- I know how to register custom JS namespaces in my extension.
- I can include and use third-party JS modules in my extension's JS code.
- I know how to migrate legacy RequireJS modules to the ES6-based.

Outputting Variables

Basic usage of variables inside Fluid templates and knowledge about escaping.

Goals:

- I can find out which variables are passed to a Fluid view.
- I can output variables with the according path syntax.
- I know how Fluid escapes variable output in templates.
- I know how to disable escaping of variables.
- I also know which security risks (XSS) may occur, when disable escaping of variables.

Links:

- Passing Variables from Typoscript FLUIDTEMPLATE:: <https://docs.typo3.org/m/typo3/reference-typoscript/12.4/en-us/ContentObjects/Fluidtemplate/Index.html#variables>

Registering Frontend Plugins

This skill covers the registration of a frontend plugin to make it available to users.

Goals:

- I know how to register a plugin with and without Extbase.
- I know how to register a plugin/controller as a content element.
- I know how to declare actions as uncached in Extbase.
- I know how to register a cached or uncached plugin without Extbase.

Links:

- Registering and configuring Plugins with and without Extbase: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ExtensionArchitecture/Extbase/Reference/FrontendPlugins.html#extbase-registration-of-frontend-plugins>

Request processing with middlewares

This skill covers the usage of PSR-15 middlewares in TYPO3 - both for frontend and backend request processing.

Goals:

- I understand how the core leverages middlewares to modularize request processing (middleware dispatcher, chained middlewares, ...).
- I know how to find out which middlewares are configured and their order of execution.
- I can write my own middlewares and add them to the frontend and backend request processing.
- I can overwrite Core-provided middlewares.

Links:

- TYPO3 Explained: Request Handling & Middlewares: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/RequestLifeCycle/Middlewares.html>

Rich Text Editor API

Modifying CKeditor's configuration programmatically: You can modify existing or add complete new configurations

Goals:

- I know how to configure the Rich Text Editor in TYPO3.
- I know how to modify YAML configuration, programatically, using events.
- I know how to plug in a custom RTE.

Links:

- TYPO3 ChangeLog: Introduce events to modify CKEditor configuration: <https://docs.typo3.org/c/typo3/cms-core/master/en-us/Changelog/10.3/Feature-88818-IntroduceEventsToModifyCKEditorConfiguration.html>

TYPO3 Debugging Utilities

Knowledge about debugging utilities provided by TYPO3.

Goals:

- I know the built-in mechanics to output debug messages:
 - Extbase DebuggerUtility
 - DebugUtility
 - admin panel
- I know how to add debug output to the frontend.
- I know how to add debug output to the backend.

Links:

- EXT: Admin Panel:: Configuration: <https://docs.typo3.org/c/typo3/cms-adminpanel/12.4/en-us/Configuration/Index.html>
- TYPO3 Explained: Debugging: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/Debugging/Index.html>

Table Configuration Array (TCA)

Configuring database tables for usage in the backend and frontend.

Goals:

- I know about the different sections of the TCA (ctrl, columns, palettes, ...).
- I know how to configure rendering of a table in backend forms.
- I know how the TCA controls information processing by the TYPO3 core (DataHandler).
- I know how the TCA is compiled from different extensions and cached.
- I can create a compliant TCA for my extensions.
- I can extend the TCA of existing tables from the core or other extensions.

Links:

- TCA reference: <https://docs.typo3.org/m/typo3/reference-tca/12.4/en-us/>
- TYPO3 Explained: TCE & DataHandler: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/Typo3CoreEngine/Index.html>

Templates, Layouts, Partials

Fluid Templates, Layouts, Partials - their interaction and properties.

Goals:

I know

- what Fluid Templates are
- what Fluid Layouts are
- what Fluid Partials are
- how Templates, Layouts and Partials are connected

I can

- structure Templates, Layouts and Partials
- combine Templates, Layouts and Partials for templating
- use Templates, Layouts and Partials to realise a specific template example

Links:

- Fluid: Template File Structure: <https://docs.typo3.org/other/typo3fluid/fluid/main/en-us/Usage/Structure.html>

The Caching Framework

This skill covers the Core's caching framework. It shows how to use existing caches and register custom caches and the types of cache frontends and backends. Additional topics are expiration and tagging of cache entries and flushing of caches.

Goals:

I can:

- use existing caches
- register and use custom caches
- decide which types of cache frontends and backends to use for which purpose

Links:

- TYPO3 Explained: Caching: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/CachingFramework/Index.html>

Tracing Errors in Logs

Knowledge about log sources and how to utilize them in order to resolve errors.

Goals:

- I know where to look when my instance throws error messages or white pages.
- I know which configuration options define the error output of TYPO3 and Extbase.
- I know how to limit error output to development machines or certain IPs on live instances.

Links:

- TYPO3 Explained: Logging Framework: <https://docs.typo3.org/m/typo3/reference-coreapi/12.4/en-us/ApiOverview/Logging/Index.html>

ViewHelper: Form

The TYPO3 CMS form ViewHelper for Fluid.

Goals:

- I know how Extbase forms can be created in Fluid templates.
- I know how data can be filled into form fields.
- I know how to connect object properties and form fields.
- I can create a form and connect it to an object.
- I can use the different view helpers to create form fields.
- I know how Extbase ensures that no additional fields are passed by malicious actors.

Links:

- Fluid ViewHelper Reference: f:form ViewHelper:: <https://docs.typo3.org/other/typo3/view-helper-reference/12.4/en-us/typo3/fluid/latest/Form.html>

XLIFF / locallang.xlf

Working with XLIFF files in TYPO3 for multilingual websites. Includes writing and extending XLIFF files, overriding translations in TypoScript, and using the f:translate ViewHelper.

Goals:

- I know what XLIFF is.
- I know how to write and extend an XLIFF file.
- I know how to introduce new languages and generate the needed XLIFF file.
- I know how to override the translations of an extension in TypoScript.
- I know how to access the translations with the f:translate-Viewhelper

Links:
